# Sani → Pure BDF Biopharmaceutical Tubing

SaniPure™ BDF™ has unsurpassed biocompatibility and is heat sealable, sterile-weldable, and is a certified animal-free material.

#### SaniPure<sup>™</sup> BDF<sup>™</sup> (Bovine Derivative Free)

Saint-Gobain Performance Plastics has developed SaniPure™ BDF™, a breakthrough innovation in polymer high-performance materials. SaniPure™ BDF™ is completely certified to be free of materials of animal origin and is the ideal choice for handling sensitive biological fluid transfer applications. SaniPure™ BDF™ combines the features of traditional silicone tubing with superior peristaltic pump life performance and low absorption characteristics. This tubing answers the industry's requirements for performance, characterization, and animal-free origination.

# **Characteristics**

SaniPure™ BDF™ has an ultra-smooth inner bore which drastically reduces potential particle entrapment and microscopic build-up during critical fluid transfer processes. This smooth fluid path also helps facilitate complete sanitation of the fluid transfer system and improves flow characteristics by reducing surface area.

The innovative design of SaniPure™ BDF™ creates an advanced tubing formulation that has an absorption rate lower than virtually all elastomeric tubing currently in use, making it the obvious selection when fluid integrity must be maintained throughout the process. This will also ensure that common preservatives which are added during processing are fully optimized.

#### **Biocompatibility**

SaniPure<sup>™</sup> BDF<sup>™</sup> tubing complies fully with the requirements of USP Class VI, European Pharmacopeia 3.2.9 and FDA 21 CFR Part 177.1210 criteria and is entirely non-cytotoxic, non-pyrogenic, and non-hemolytic.

To ensure the superior characteristics of SaniPure™ BDF™ the following tests were also performed: Genotoxicity Tests, Bacteriostasis – Fungistasis Tests, Physiochemical Testing for Elastomeric Closures (USP <381>), Physiochemical Testing for Plastics (USP <661>), and Total Extractables (per 21 CFR 177.2600). SaniPure™ BDF™ tubing has a masterfile with the U.S Food and Drug Administration.

#### **BIOPHARMACEUTICAL PRODUCTS**

#### Features/Benefits

- Certified to be free of materials of animal origin
- Ultra-smooth inner bore reduces potential for particle entrapment
- Documented biocompatibility for sensitive applications
- Meets USP Class VI, EP 3.2.9 & FDA criteria
- Non-cytotoxic, non-pyrogenic, and non-hemolytic
- Extremely low absorption and adsorption compared to silicone tubing
- Heat sealable, bondable, sterileweldable, and custom moldable for assemblies
- Superior peristaltic pump life
- Fully autoclavable and sterilizable

## **Typical Applications**

- · Sterile filling and processing
- Cell harvest and media process systems
- Vaccine production
- Production filtration and fermentation
- Cell and tissue culture transport
- Drug delivery systems
- Diagnostic equipment and laboratory research
- Bioreactor process lines
- High-purity water transfer
- Buffer solutions

<sup>\*</sup>Working pressures are calculated at a 1:5 ratio relative to burst pressure using ASTM D1599.

The values listed for working and burst pressures are derived from tests conducted under controlled laboratory conditions. Many factors will reduce the tubing's ability to withstand pressures, including temperature, chemical attack, stress, pulsation and the attachment to fittings. It is imperative that the user conduct tests simulating the conditions of the application prior to specifying the tubing for use.
